

Quentin Adolphe

Detroit, MI | gadolphe1@gmail.com | <https://qadolphe.com>

Education:

Georgia Institute of Technology

Expected 2029

Master of Science in Computer Science (Edge AI specialization)

Swarthmore College

Class of 2025

Bachelor of Arts in Computer Science, Minor in Engineering

GPA: 3.9/4.0

Work Experience:

General Motors

2024 - Present

Robotics AI/ML Software Engineer | 2026 - Present

- Integrate and test motion-planning and scene-perception software for autonomous systems

Dimensional Systems Engineer | 2026

- Replaced a manual Excel/VBA workflow with a Databricks ETL pipeline, processing ~100K deliverable rows across vehicle programs to improve DSE visibility and execution
- Developed a 3D VAE tool to edit tolerance models, run simulations, analyze results, and generate reports, leading to 40+ hours in savings per simulation/report cycle

CFD Automation Engineer | 2025 - 2026

- Built a Python analytics framework to evaluate tire parameters affecting virtual vehicle stability
- Rebuilt legacy Tkinter GUI as a React/Electron and Flask application to streamline pre-processing, HPC submission, monitoring, and post-processing work

Software Validation Engineer Intern | Summer 2024

- Built applications assisting in flash development, including a custom utility file generator tool
- Automated ECU flash validation against Software-Defined Vehicle specifications

USAA - Software Engineering Intern

Summer 2023

- Full-stack development of a modernized life insurance application
- Implemented pages with React.js and JavaScript, and created metadata

Forward Edge AI - Economic Research Investigator

Summer 2022

- Wrote a National Science Foundation-funded economics research paper on the business dealings and intricacies of scam centers and criminals around the world
- Assessed cybersecurity and operational capabilities for the NSA's Protocol Free Encryption Device as part of a CRADA team

Projects: <https://qadolphe.com>

Running Analysis with Machine Learning - Kotlin, TensorFlow

- Used TensorFlow's Thunder convolutional neural network to estimate the position of a sprinter's joints
- Trained neural network to identify the current phase of a sprinter in motion

3D Triangulation of Objects - Python

- Calibrated a stereo camera setup to calculate 3D real-world coordinates from 2D images

Turtlebot Maze Traversal - Python

- Implemented Dijkstra's algorithm and a PD controller to navigate a robot through a maze

Hobbies and Skills:

- **Skills:** Data aggregation, Process automation, ETL pipelines, Python, Java, React, Node.js, MCP Servers
- **Sports:** Varsity Track and Field (Swarthmore College), Soccer, Ultimate Frisbee
